Develop a JAVA code to display the balance. Include the following members:

- Design a class to represent a bank account.
- Data Members: Name of the depositor, Account number, Type of account(Savings/Current), Balance amount in the account(Minimum balance is Rs.500.00)
- Methods:

1. To read account number, Depositor name, Type of account.
2. To deposit an amount (Deposited amount should be added with it)

3. To withdraw an amount after checking balance(Minimum balance must be Rs.500.00)

Note : Assume that balance amount = 10000

Testcase: 1. 100, Raja, S, 8000

2. Raja, 100, S, 9000

3. 101, Rani, S, 12000

4. 102, Ragu, W, 8000

5. 103, Ravi, C, 10000

Your Code

```
1 import java.util.Scanner;
2 public class main{
3     public static void main(String[] args)
4         Scanner sc=new Scanner(System.in)
5         String name=sc.next();
```

```
6      String accno=sc.next();
7      String typeofacc=sc.next();
8      double amount=sc.nextInt();
9      bankacc acc=new bankacc();
10     acc.readaccno(name, accno, typeofacc);
11     acc.display();
12 }
13 }
14 class bankacc{
15     String name;
16     String accno;
17     String typeofacc;
18     double balance;
19     void readaccno(String name,String accno,String typeofacc){
20         this.name=name;
21         this.accno=accno;
22         this.typeofacc=typeofacc;
23         this.balance=10000;
24     }
25     void deposit(double amount){
26         if(amount>0){
27             balance=balance+amount;
28         }
29     }
30     void withdraw(double amount){
31         if(amount>0 && balance-amount>=5000){
32             balance=balance-amount;
33         }
34     }
35     void display(){
36         System.out.println("Name of the customer is "+name);
37         System.out.println("Account number is "+accno);
38         System.out.println("Type of account is "+typeofacc);
39         System.out.println("Balance amount is "+balance);
40     }
41 }
```

Output

```
Name of the depositor:Raja  
Account number:100  
Type of account(Savings/current): Savings  
Balance amount= 10000.0
```

Level 3 — Hard (H) Factors — Numbers

✓ Submitted

Write a program to print number of factors and to print nth factor of the given number.

Sample Input:

Given Number: 100

N = 4

Sample Output:

Number of factors = 9

4th factor of 100 = 5

Testcase: 1. Given Number = 512 , N = 6

2. Given Number = 343 , N = 7

3. Given Number = 1024 , N = 0

4. Given Number = -6561 , N = 3

5. Given Number = 0 , N = 2

Your Code

```
1 import java.util.Scanner;
2 public class main{
3     public static void main(String[] args)
4     {
5         Scanner sc=new Scanner(System.in)
6         int num=sc.nextInt();
7         int n=sc.nextInt();
8         int number=Math.abs(num);
9         if(number==0){
10             System.out.println("Number of
11             System.out.println("Nth factc
```

```
11         return;
12     }
13     int count=0;
14     int nthfactor=-1;
15     for(int i=1;i<=number;i++){
16         if(number%i==0){
17             count++;
18             if(count==n){
19                 nthfactor=i;
20             }
21         }
22     }
23     System.out.println("Number of factors=" + count);
24     if(n>=1&&n<=number){
25         System.out.println(n + "th factor=" + nthfactor);
26     }
27     }else{
28         System.out.println("Nth factor does not exist");
29     }
30 }
31 }
```

Output

```
Number of factors=10
6th factor of 512=32
```
